Bad Design 1: Confusing Remote Control

Pic1)

Description:

The tree that has been planted in the parking lot is in pathway , so that the students and faculty are finding difficulty in parking their vehicle.

Place:

11th gate of VIT

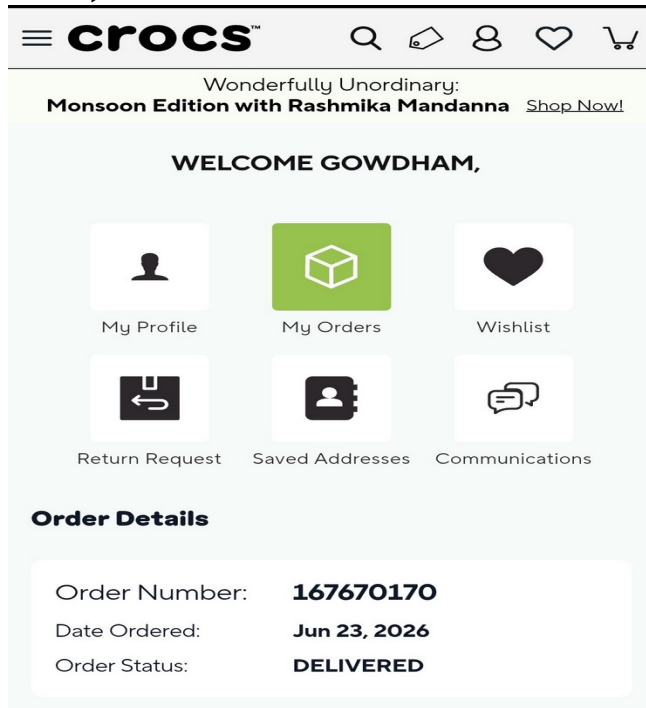

Reasons why the design is bad:

- The tree is not placed at either side of the parking.
- Since it has been placed in the middle of the parking lot , a particular amount of space is being wasted.

Suggested Improvement:

- Displace the tree somewhere else so that it doesn't disturb the parking area.

Pic2)

Description:

Once the order is placed, the customer is not notified properly about the product tracking and shipments. Only one or two emails regarding the confirmation of the order is been received by the customer.

Place:

Crocs.com

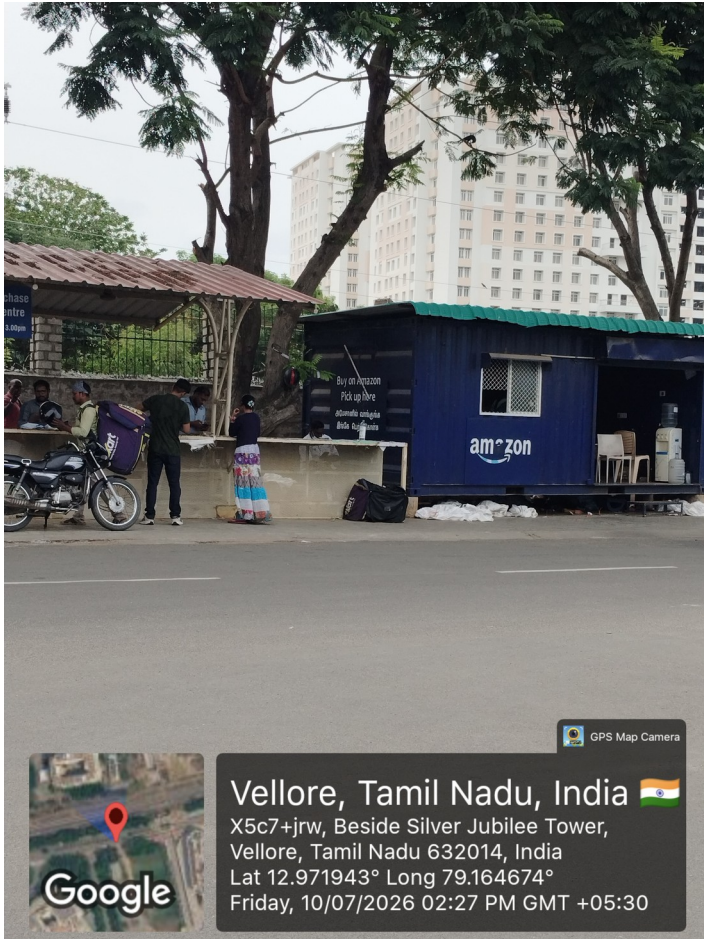

Reasons why the design is bad:

- When the order is placed, the tracking details aren't described or mentioned anywhere in the site.
- Only the order confirmation is received and the shipment is notified only at the day of delivery not before that.

Suggested Improvement:

- Add the shipment tracking feature so that the customer can track the order whenever they want to.

Pic3)

Description:

While collecting the order, the students find it difficult to find their delivery partner and no proper instruction is mentioned anywhere in that place to notify about collecting the order.

Place:

SJT parking area

Reasons why the design is bad:

- Instruction for collecting the order for students is not mentioned clearly, so that the students find it difficult to find their respective delivery partner.
- Since more online platforms exist, find which delivery area where it is located is tough.
